

Hampton Wants YOU to Join the Northeast

Pollinator Pathway

Be part of the Pollinator Revolution!

What's a Pollinator Pathway? It's a series of continuous corridors of open space that have habitat and food sources for butterflies, hummingbirds, bees and other pollinating insects and wildlife.

Without pollinators, we can't feed ourselves. Pollination enables the plants in our yards, parks, farms and orchards to reproduce.

If we begin to **manage our own yards organically and with native plantings**, we can use them to connect parks and preserves, **creating crucial corridors for wildlife**. That is the idea behind the Pollinator Pathway.

Everyone can participate! Simply add (or nurture) native pollinator-friendly plants to your yard, subtract a little lawn (cut high or reduce the size), and avoid the use of pesticides and lawn chemicals.

Add one pollinator-friendly plant or an entire garden or meadow—it's up to you!

For a list of native northeast plants, and to register your garden, go to www.pollinator-pathway.org. Send us an email when you do so we can put you on our map!

Watch for **upcoming events and information**—let's get all of Hampton involved!

Sponsored by the Hampton Conservation Commission. More info (and to notify us that you've registered): Contact Marcia Kilpatrick at kalmia1234@gmail.com.
